# EVOLUTION

- Charles Darwin collected animals from all over the world and worked out links between them. However, he and his crew aboard HMS *Beagle* did eat some of them...

- His idea was that creatures changed over thousands and millions of years. Look at this cartoon. What changes do you see? Describe the stages in your own words.

---

---

---

---

- Charles Darwin developed his theory of evolution, starting with amoebae and ending with mammals.
- Look at the cartoon of Darwin and his thought chain. Write the similarities and differences between each example along the chain.
