# Air resistance

- This is your opportunity to not only make a fully operational parachute but to find out how it works, all courtesy of air resistance!
- Cut out both rectangles.
- Attach 10cm of cotton to each corner marked with an 'X'.
- Join the threads together with tape.
- Attach paperclips to the thread.
- Drop both parachutes from the same height.
- Can you predict which one will be the first to land?
